Germany

Sustainability in Development Cooperation ... and FOSS

→ Participation, Independence

■ Development of adapted and independent software infrastructure

→ Empowerment

■ Establishment of proper IT-expertise and control over systems

→ transfer of knowledge, local adaptation

■ Adaptation, localisation (language and added value through local business models), learning by coding

→ enabling legal and regulatory framework (includ. property rights)

■ mitigation of legal problems through FOSS licences

→ non-discrimination, equality of opportunity

■ Openness, accessibility of FOSS

Capacity Building in Innovative Information and Communication Technologies through Free and Open Source Software in Southern and East Africa

Objective: Fostering small and medium-sized enterprises (SME) in the field of Free and Open Source Software through regional networking and strengthening of consulting capacities of ICT associations and training institutions.

Partners: the Free Software and Open Source Foundation for Africa (FOSSFA: executive@fossfa.net, www.fossfa.net), OSISA, InWEnt

Region: Southern and East Africa, **Duration:** 2008 – 2010

Main Instruments: Advanced Training and Networking, on- and offline

Partners: African regional + national IT associations, ICT training institutions, universities, & other change agents

Capacity Building International
Germany

ict@innovation

Pillar A: African FOSS Business Models and skills for ICT-based SME to deliver innovative and appropriate FOSS products, services and training

Pillar B: Spreading FOSS Certification - Quality management for FOSS services through certification

Pillar C: Innovative local FOSS applications for social and economic development

Pillar D: Crosscutting: Regional networking and international exchange

inWent

Capacity Building International
Germany

Pillar A: African FOSS Business Models and Skills for ict-based SME to deliver innovative and appropriate FOSS products, services and training

Aim: ICT associations, their members, ICT-training institutions, universities as well as other change agents of the ICT field know about regional best practices and examples of adapted business models and marketing-related skills in the field of FOSS. This enables them to spread practical key knowledge and skills to ICT-SME on how to create innovative local businesses with FOSS.

Roadmap:

Phase 1 (2008): Research + analysis of African FOSS business models; collaborative development of hands-on training materials, course design

Phase 2 (2009): Train-the-Trainer via regional trainings for multipliers

Phase 3 (2010): Roll-Out via national trainings for SME
Networking activities are an ongoing throughout all phases.

Important dimensions of sustainable FOSS business models in developing countries

Topics of InWEnt training courses in Asia and Africa

FOSS entering the global and local business world and ecosystems (evolution of communities, ecosystem, software market)

Open standards (lock-in strategies and aversion etc)

Global and local FOSS usage models

Emerging FOSS business models for developing countries (linkage between licence and models, windows of opportunity, incorporating FOSS in existing business models, added value etc)

FOSS based open innovation (non-linear processes, commoditization, modularity, open innovation, public incentives etc)

From FOSS tactics to enterprise strategy (revenue sources, business risks etc)

Local market analysis (needs, clients purchasing power)

Capacity Building International
Germany

Strategies for FOSS Market Segments in Developing Countries

	Large Enterprise Segment	Small-Medium Enterprise Segment	Government Segment
Replacement Market	Service and Support Scalability (Not cost)	Low cost advantage Features: security, stability, scalability	Emphasize FOSS culture Value of Open standards
Unserved Market	Few in this market. Quality and scalability.	Emphasize cost advantage	Emphasize cost less dependence Value of FOSS culture

My hunch on the future of FOSS Business Models in Dev. Countries

- Local
- Not outsourcing
- SME-based
- Addressing local need through local innovation

Capacity Building International
Germany

My hunch on the top three challenges

- Local knowledge base
- Procurement policies of public bodies
- Sustainability and scale of local FOSS communities
